

## TECHNICAL BRIEF: Pressure Regulators with Non-Rising Adjusting Bolt

### Series PRH/PRHM

Plast-O-Matic's PRH/PRHM in sizes  $\frac{3}{4}$ " to 2" may be shipped with a new, non-rising adjusting bolt. The performance characteristics and pressure setting principles are identical. The recessed or non-rising design is set using two (2) allen keys; a  $\frac{3}{8}$ " to adjust and set pressure, and a  $\frac{5}{32}$ " to lock the setting. The traditional adjusting bolt with lock nut is set using a  $\frac{3}{4}$ " open-end wrench.

The new, non-rising adjustment bolt is used on most regulators  $\frac{3}{4}$ " to 2". The traditional bolt is supplied with some body material combinations and on special orders.
